

Neurofibromatosis (neuro-fibromatosis) is a neurological genetic disorder that can cause tumors to form on the nerves anywhere in or on the body at any time. At this time scientists have identified 3 types of neurofibromatosis: NF1, NF2, and Schwannomatosis.

NF is a progressive disorder that:

- ♥ is a dominant genetic condition with only 50% of those affected having prior family history of NF
- ♥ affects all races and sexes equally
- ♥ may be associated with deafness, vision impairment, epilepsy, learning disabilities and cancer
- ♥ has no effective treatment or cure

Proceeds from Committed to Curing NF will support the programs of NF, Inc., Northeast, a 501(c)(3) tax exempt organization. Their mission is to find a treatment and cure for neurofibromatosis by promoting scientific research, creating awareness and supporting those who are affected by NF.

Neurofibromatosis, Northeast
9 Bedford Street, Burlington, MA 01803

To purchase tickets online visit www.jemmremodeling.com

Tickets are \$35 per person or
\$325 for a table of ten.

Please make checks payable to
Neurofibromatosis, Northeast
and mail to:
Melissa Malerba
33 Daly Road
Medford, MA 02155

To pay by Credit Card contact the NF
office 781-272-9936, or go to the website
www.nfincne.org

Neurofibromatosis is the most common genetic disorder caused by a single gene.
NF affects three times as many people as muscular dystrophy and cystic fibrosis
combined! Yet, most people have never even heard of NF.

We need your help to change that!

If you would like to donate monetary gifts, raffle items and/or services for this
special night, contact Melissa or Michael Malerba. And, please consider one of the
sponsorship options below:
